

SHAMIR

Shamir Glacier™ Anti-Fog with Duplex-Technology

Resist Fogging When Wearing a Mask

In these challenging times, when the mask covering our face has become part of our lives, Shamir has a technology solution that can provide you with clear vision.

When constant activity is causing your body to give off more heat and humidity leading to lens fogging, Shamir has a permanent solution to deliver clear vision with Shamir **Glacier™ Anti-Fog**.

ReCreating Perfect Vision®, during an Imperfect Time.

Duplex-Technology Delivers Two Technologies in One Lens

Frontside

Glacier™ Plus, a Premium Anti-Reflective Coating as Standard

Premium Anti-Reflective as Standard on Frontside

Glacier™ Plus is a Premium Anti-Reflective coating on the frontside that comes standard, to resist, repel, and reduce any dust, debris and glare for optimal vision.

Backside

Permanent Anti-Fog

No Initial Spray Activator or Re-Activation Required

Unlike other products that require spray solutions to activate their fog technology, Glacier™ Anti-Fog provides fog-free vision from the moment you receive the lens and lasts to the end of your shift. No special directions are required to ensure product performance.

H2O

Water Spreading and Collection Process

Exceptional visual acuity is provided, through the water collection and spreading process, providing relief against fog and distorted vision.

Do not mark backside with pen.

To keep your Shamir Glacier™ Anti-Fog lenses clean

- It is recommended to clean front and backside of the lens surfaces separately.
- For removing dirt from backside surface, we recommend using a wet cloth and then drying with a dry cloth (see illustration to the right).
- You may also use denatured alcohol, isopropyl alcohol, or a lens cleaning solution without acetone.
- Do not soak or rinse under water.
- Do not clean with acetone.
- Do not write on the backside of the lens.

Wet cloth

Dry cloth

Do not mark backside with pen.
